

Centralize your business.

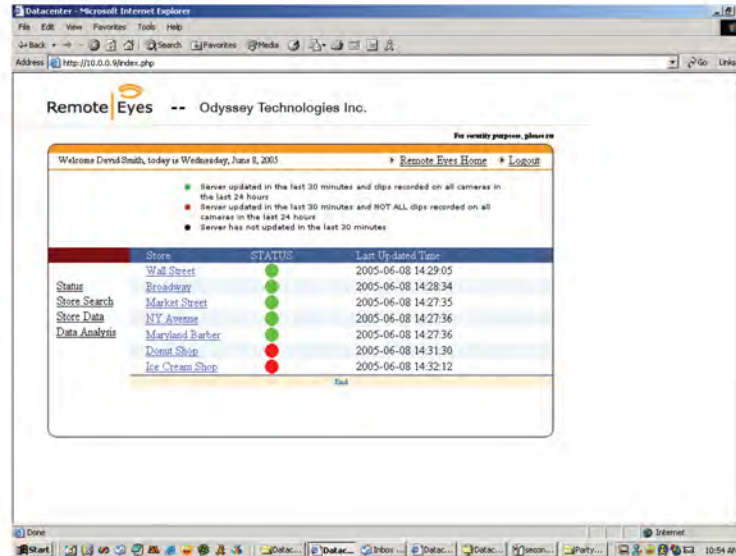

Remote Eyes allows you to build a central management center for all of your video and audio monitoring and archiving needs. Remote Eyes also centralizes archiving and searching of transactions throughout your enterprise and integrates your transaction archive with your video archive.

Manage your operations.

Is the sidewalk shoveled? Is the door locked? Did the contractor show up? Remote Eyes puts your daily operations at your fingertips regardless of where you are. Access your properties using wireless broadband from the road. View your cameras and transactions using a wireless handheld PDA device.

Reduce your exposure.

Remote Eyes is the only technology in the industry to give you a multi-year continuously recorded video archive for all of your cameras. With Remote Eyes, you can easily refute those costly "slip and fall" claims. Try that using motion-activated recording!

"I've seen a dramatic increase in sales and a decrease in shrinkage. The greatest benefit of Remote Eyes has been the 500% improvement in our customer service!" —Ron Furman, owner, Max's on Broadway, Baltimore

"Nobody does it like Remote Eyes. We recently attended a leading security conference and saw about a thousand vendors and no one had a solution that even came close." —Robert O'Connor, Edgewood Management Corporation
